this book has emerged out of our long time research interests on the topic of latex film formation over the years we have built up a repertoire of slides used in conference presentations short courses and tutorials on the topic the story presented in this book has thereby taken shape as it has been told and re told to a mix of academic and industrial audiences the book presents a wide body of work accumulated by the polymer colloids community over the past five decades but the selection of examples has been flavoured by our particular experimental interests and development of mathematical models we intend the book to be a starting point for academic and industrial scientists beginning research on latex film formation the emphasis is on fundam tal mechanisms however and not on applications nor on specific effects of formu tions we hope that the book consolidates the understanding that has been achieved to date in the literature in a more comprehensive way than is possible

in a review article we trust that the reader will appreciate the fascination of the topic

this book is useful for people in engineering and education for writing project reports seminars conference research papers latex is becoming more popular day by day due to its excellent typesetting and ease of use but there is no good book

available in the market which can talk in terms of the need of the student and or researchers this book is a ready reckoner for typesetting a good report book using latex it covers all necessary and essential information of latex required to typeset a good report book while typesetting our reports books we found that out of 2600 packages we hardly used not more than 20 packages and if the report book is heavy in the text then many time not more than 5 packages are ever required to typeset it this showed us a definite structure to follow for typesetting a report book
