the increased movement of people globally has changed the face of national and international schooling higher levels of mobility have resulted from both the willing movement of students and their families with a desire to create a better life and the forced movement of refugee families travelling away from war famine and other extreme circumstances this book explores the idea that the complex connections created by the forces of globalisation have led to a diminishing difference between what were once described as international schools and national schools by examining

a selection of responses from students attending international schools in brazil the united kingdom france germany the philippines and switzerland the book discusses key issues surrounding identity and cosmopolitan senses of belonging chapters draw from current literature and recent qualitative research to highlight the concerns that students face within the international school community including social psychological and academic difficulties the interviews provide a rich and unique body of knowledge demonstrating how perceptions of identity and belonging are changing especially with affiliation to a national or a global identity the notion that international students have become global citizens through their affiliation to a global rather than a national identity exhibits a changing and potentially irreversible trend global identity in multicultural and international educational contexts will be of key interest to researchers academics and policy makers involved with international schooling and globalised education

one striking weaknesses of our financial architecture which helped bring on and perhaps deepen the panic of 2008 is an inadequate appreciation of the past information about how the system functioned and the reliability of organizations and institutional controls were drawn from a relatively narrow group of recent examples history and financial crisis lessons from the 20th century is an attempt to broaden the range of historical sources used by policy makers to understand and treat financial crises many recent discussions of the 2008 panic and the economic turmoil have found the situation to either be unprecedented or greatly similar to that of 1931 however the book s wide range of contributors suggest that the economic crisis of 2008 cannot be categorised in this way this book was originally published as a

this is the first book to provide a full and dispassionate account of the politics and economics of the eurozone crisis focusing on the interlinked origins and impacts of the euro zone crisis and the policy responses to it the book is distinguished from existing research by its avoidance and rejection of the too often simplistic analysis that has characterized political media and regrettably some academic coverage and by its attempt to escape from the tyranny of day to day events and short term developments each of the contributors identifies an important question and undertakes a careful empirical theoretically informed analysis that produces novel perspectives together they seek to balance many of the existing accounts that have rushed to sometimes unwarranted conclusions concerning for example the locus of institutional power in european crisis management the power and centrality of particular member states notably germany which has been attributed with hegemonic status the supposed entrapment of eu policy makers by an austerity ideology and the deep flaws that apparently afflict the solutions to the crisis put painstakingly in place such as banking union while it will be some time before the eu can put the crisis behind it and the dust finally settles on the revised institutional system that emerges the political and economic dynamics of the eurozone crisis marks an important step towards a considered reflective analysis of the tumultuous events and developments of the crisis period
