Using Multimedia Systems, Tools, and Technologies for Smart Healthcare Services

2022-10-14

with the advancement of sensorial media objects and technologies multimedia can play a significant role in smart healthcare by offering better insight of heterogeneous healthcare multimedia content to support affordable and quality patient care while researchers and the scientific community have been making advances in the study of multimedia tools and healthcare services individually very little attention has been given to developing cost effective and affordable smart healthcare services multimedia based smart healthcare has the potential to revolutionize many aspects of our society however many technical challenges must be addressed before this potential can be realized using multimedia systems tools and technologies for smart healthcare services includes high quality research on the recent advances in various aspects of intelligent interactive multimedia technologies in healthcare services and more specifically in the state of the art approaches methodologies and systems in the design development deployment and innovative use of multimedia systems tools and technologies for providing insights into smart healthcare service demands covering topics such as genetic algorithms automatic classification of diseases and structural equation modeling this premier reference source is an essential resource for hospital administrators medical professionals health it specialists hospital technicians students and faculty of higher education researchers and academicians
