foreword by president george w bush with contributions from world renowned economists and nobel prizewinners the 4 solution is a blueprint for restoring america s economic health the united states is reaching a pivotal point in its economic history millions of americans owe more on their homes than they are worth long term unemployment is alarmingly high and the congressional budget office is projecting a sustainable growth rate of only 2.3 a full percentage point below the average for the past sixty years unless a turnaround comes quickly the united states could be mired in debt for years to come and millions of americans will be pushed to the sidelines of the economy the 4 solution offers clear and unflinching ideas on how to revive america s economy it sets a positive economic goal and asks some of the top economic minds on how to achieve it with a focus on removing government constraints the 4 solution defines the policies that will allow americans to save invest and create the jobs that the united states needs the 4 solution draws on the best minds in the business including five nobel laureates robert e lucas jr on the history and future of economic growth gary s becker on why we need immigrants in order to grow edward prescott on the cost to growth of the welfare state vernon smith on why housing leads us into and out of recessions myron scholes on why we need to innovate in order to grow the economy

a call for the left and right the business community and environmentalists bankers and activists to join together reclaim capitalism and force profits to align with the planet a warming climate and a general distrust of wall street has opened a new cultural divide among those who otherwise agree we must mitigate climate risk anti market critics such as naomi klein target capitalism itself as a root cause of climate change while climate savvy business leaders believe we can largely continue with business as usual by tinkering around the edges of our economic system rand argues that both sides in this emerging cultural war are ill equipped to provide solutions to the climate crisis and each is remarkably naïve in their view of capitalism on one hand we cannot possibly transition off fossil fuels without the financial might and entrepreneurial talent market forces alone can unlock on the other without radical changes to the way markets operate capitalism will take us right off the climate cliff rejecting the old left right ideologies rand develops a more pragmatic view capable of delivering practical solutions to this critical problem a renewed capitalism harnessed to the task is the only way we might replace fossil fuels fast enough to mitigate severe climate risk if we leave our dogma at the door rand argues we might just build an economy that survives the century

around the turn of the millennium it had become painfully evident that development aid charity or global business as usual were not going to be the mechanisms to alleviate global poverty today there is little dispute that poverty remains the most pressing global problem calling for innovative solutions one recent strategy is the base of the pyramid bop concept developed by prahalad and hart which relies on entrepreneurial activity tapping into the previously ignored markets of the economically most disadvantaged it is a process requiring innovations in several disciplines technological social and business this book covers a number of areas first much of the current bop discussion emphasises targeting products to the needs of the poor but do we actually know what the real needs of the poor are this book takes a bottom up human centred approach and examines examples that truly engage the poor in bop product and service development what types of needs assessment methodologies are indicated considering the cultural differences in bop countries are the existing methodologies adequate do they need to be redefined and redeveloped second the book considers how we can balance poverty alleviation and stimulate economic growth without stressing the ecosystem tragically the poor are hardest hit by the adverse effects of environmental deterioration such as water shortages climate change or the destruction of habitats while the economic welfare of the poor is critical the bop approach must balance its inherent paradox of encouraging greater consumption while avoiding further pressures on environmental sustainability the link between the bop approach and sustainable development is a key feature of this book third it looks at innovation and asks what kinds of bottom up innovation open source technological social and business support bop initiatives and sustainable development fourth the book deals with the

relationship between development assistance and bop is a bop strategy the antithesis to development aid or can these two co exist or even complement each other finally the book raises questions about the relationship between corporate responsibility and bop is bop a new form of corporate neo colonialism or a new form of corporate responsibility although the bop concept has unleashed an extensive and generally enthusiastic response from academics businesses ngos and governments the knowledge domain around this concept is still in the early stages of development this book addresses that need with a focus on the needs of the end users the poor as a starting point for bop products and innovations with contributions from both supporters and critics it provides a treasure trove of global knowledge on how the concept has developed what its successes and failures have been and what promise it holds as a long term strategy for alleviating poverty and tackling global sustainability
