these proceedings collect the major part of the lectures given at ENUMATH2003 the european conference on numerical mathematics and advanced applications held in prague czech republic from 18 august to 22 august 2003 the importance of numerical and computational mathematics and scientific computing is permanently growing there is an increasing number of different research areas where numerical simulation is necessary let us mention fluid dynamics continuum mechanics electromagnetism phase transition cosmology medicine economics finance etc the success of applications of numerical methods is conditioned by changing its basic instruments and looking for new appropriate techniques adapted to new problems as well as new computer architectures the ENUMATH conferences were established in order to provide a forum for discussion of current topics of numerical mathematics they seek to convene leading experts and young scientists with special emphasis on contributions from europe recent results and new trends are discussed in the analysis of numerical algorithms as well as in their applications to challenging scientific and industrial problems the first ENUMATH conference was organized in paris in 1995 then the series continued by the conferences in heidelberg 1997 jyvaskyla 1999 and ischia porto 2001 it was a great pleasure and honour for the czech

numerical community that it was decided at ischia porto to organize the enumath2003 in prague it was the first time when this conference crossed the former iron curtain and was organized in a postsocialist country
