concepts of biology is designed for the single semester introduction to biology course for non science majors which for many students is their only college level science course as such this course represents an important opportunity for students to develop the necessary knowledge tools and skills to make informed decisions as they continue with their lives rather than being mired down with facts and vocabulary the typical non science major student needs information presented in a way that is easy to read and understand even more importantly the content should be meaningful students do much better when they understand why biology is relevant to their everyday lives for these reasons concepts of biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand we also strive to show the interconnectedness of topics within this extremely broad discipline in order to meet the needs of today's instructors and students we maintain the overall organization and coverage found in most syllabi for this course a strength of concepts of biology is that instructors can customize the book adapting it to the approach that works best in their classroom concepts of biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand and apply key concepts

introduction to ocean and ecology course description this is the suggested course sequence that allows one core area of science to be studied per semester you can change the sequence of the semesters per the needs or

interests of your student materials for each semester are independent of one another to allow flexibility semester 1 oceans the oceans may well be earth s final frontier these dark and sometimes mysterious waters cover 71 percent of the surface area of the globe and have yet to be fully explored under the waves a watery world of frail splendor foreboding creatures and sights beyond imagination awaits the ocean book will teach you about giant squid and other monsters of the seas centuries of ocean exploration hydrothermal vents the ingredients that make up the ocean harnessing the oceans energy icebergs coral reefs ships submarines and other ocean vessels the major ocean currents el niño whirlpools and hurricanes harvesting the ocean s resources whales dolphins fish and other sea creatures learning about the oceans and their hidden contents can be exciting and rewarding the abundance and diversity of life the wealth of resources and the simple mysteries there have intrigued explorers and scientists for centuries a better understanding of our oceans ensures careful conservation of their grandeur and beauty for future generations and lead to a deeper respect for the delicate balance of life on planet earth semester 2 ecology study the relationship between living organisms and our place in god s wondrous creation learn important words and concepts from different habitats around the world to mutual symbiosis as a product of the relational character of god this is a powerful biology focused course specially designed for multi age teaching students will study the intricate relationship between living organisms and our place in god s wondrous creation examine important words and concepts from different habitats around the world to our stewardship of the world s resources gain insight into influential scientists and their work more fully understand practical aspects of stewardship investigate ecological interactions and connections in creation the ecology book encourages an understanding of a world designed not as a series of random evolutionary accidents but instead as a wondrous well designed system of life around the globe created to enrich and support its different features activities provide additional ways to make the learning experience practical

a critical task for public school teachers is to build and maintain productive relationships with their students especially to facilitate learning that task is particularly important in preparing new teachers for urban schools because cultural differences between the majority of urban teachers and their students can complicate and impair those relationships multicultural education literature often describes and analyzes preservice teachers typically white middle class not urban and often female who are entering urban environments as being resistant to learning about race and class that research has usually been conducted on preservice teachers in their coursework often in the lone required diversity course and apart from practice work in the schools this study is guided by the theory that in situations people rely upon the habits of thought feeling attitude and action they ve developed through interaction with others and that people experience a strong continuity in the use of those habits during life though these habits may help one to negotiate situations they may also be a hindrance especially in situations significantly different from familiar ones i studied three interns from white middle class suburban and rural backgrounds who were placed in urban high schools with many nonwhite students from working class backgrounds to examine this central question how did the three interns use the habits they formed as honors students in mainly white monolingual middle class rural or suburban schools and communities with their characteristics to forge conceptions and practices for teaching students in urban high schools and communities with characteristics that differ appreciably i conducted this study in the interns placements using classroom observations follow up interviews and data from university coursework to analyze the meaning of the intern s experiences for them i highlight how interns habitual views of race and class were consistent with descriptions in the literature and impacted their practices however i also analyze an important dimension not often considered how interns habits of being good students hindered their abilities to connect with their students who generally did not have the same positive attitude toward schools as the interns i then present a case study of each intern to analyze their teaching practices which mostly involved lecture worksheets and recitation in doing so i demonstrate how resistance was operating but also show a variety of factors that complicated interns efforts to develop competence as teachers including their efforts to form relationships with their students i explore how the interns made sense of their situations in ways that negated issues of race and class because the interns struggles to learn how to teach included but exceeded the scope of the resistance argument i argue for a reconceptualization of resistance that recognizes it as an expected reaction when a piece of an intern s valued identity is under assault by experiences for which habits are largely unequipped to deal i argue that such a conceptualization can help teacher educators to work with interns more effectively as learners in very unfamiliar and uncomfortable territory i discuss some possible directions for teaching and research for teacher educators who undertake the charge of preparing future teachers to work with students from different backgrounds the dissertation citations contained here are published with the permission of proquest llc further reproduction is prohibited without permission copies of dissertations may be obtained by telephone 800 1 800 521 0600 page proquest com en us products dissertations individuals shtml

algae are an important component of aquatic benthic ecosystems because they reflect the health of their environment through their density abundance and diversity this comprehensive and authoritative text is divided into three sections to offer complete coverage of the discussion in this field the first section introduces the locations of benthic algae in different ecosystems like streams large rivers lakes and other aquatic habitats the second section is devoted to the various factors both biotic and abiotic that affect benthic freshwater algae the final section of the book focuses on the role played by algae in a variety of complex freshwater ecosystems as concern over environmental health escalates the keystone and pivotal role played by algae is becoming more apparent this volume in the aquatic ecology series represents an important compilation of the latest research on the crucial niche occupied by algae in aquatic ecosystems presents algae as the important player in relation to environmental health prepared by leading authorities in the field includes comprehensive treatment of the functions of benthic algae as well as the factors that affect these important aquatic organisms acts as an important reference for anyone interested in understanding and managing freshwater ecosystems
