in the 1960 s very little science and engineering had been applied to the art of motor racing as a result there was no general agreement about the best technical approach to generating speed on a road racing track each car maker viewed the problem through the lenses of their own history and capabilities the cars on the starting grid demonstrated how varied these histories were when ford first assaulted le mans in 1964 the company followed a similarly casual approach by initially purchasing a race car design from the english firm lola this car s numerous shortcomings soon led ford to apply its considerable engineering and developmental resources to the project and the result was the one two three finish in 1966 first place finishes followed in 1967 1968 and 1969 it is the fabulous victories by ford in the 1960 s that inspired the new 2005 ford gt based on a concept car the new production car embodies the characteristic proportions and styling elements of the original gt under its skin however it has little in common with the original other than its mid engine layout the 2005 ford gt must function as a street car with a climate control system moderate interior noise levels a reasonable ride and the ability to operate in extremes of hot and cold the seven original sae papers from the 1960 s contained in this book provide a wonderful insight into the development of the original ford gt during what many consider to be the technically most interesting period of sports car racing the 11 sae papers about the new gt included in this volume explain how ford engineers managed to meet numerous modern day requirements while staying true to the spirit of the original

the story of kar kraft began as did many others in the automotive industry with an axe to grind in 1963 ford was seriously interested in purchasing ferrari ferrari was a legendary brand with considerable success in racing and ford saw the acquisition as a great way to be instantly successful in the racing arena when enzo ferrari realized that ford would not give him complete control of the racing program he backed out of the deal late in the process ford had spent millions in vetting and audits which then set in motion a vengeful response against ferrari the result was the unthinkable ford beat ferrari at le mans ford wanted to become competitive quickly but it did not have the race history or resources in house to remedy the situation ford searched the u k for an independent company to help accelerate its race car development it first settled on lola cars and set up ford advanced vehicles later ford brought its lemans effort to the u s and the kar kraft relationship was established although kar kraft was technically an independent company it really only had one customer ford special vehicles kar kraft s story doesn t begin and end with the gt 40 that took the win away from ferrari at le mans ford expanded upon the program and organized an all out assault on racing in general cars were prepared for trans am nascar nhra and can am competition street versions of the boss 429 were assembled under its roof and fabled prototypes including the lid mustang boss 302 maverick and mach 2c were all assembled in ford s contracted race shop and then out of the

firsthand account of the inception design development and production of the original mustang with stinging losses from the edsel ford in mind at ford the mustang project was an uphill battle from day one lee iacocca and his assembled team had a herculean task to convince henry ford ii to take a risk on a new concept of automobile but with the help of hal sperlich's detailed market research the project received the green light henry ford ii made it clear that jobs were on the line including iacocca's if it failed the process of taking a car from sketch to clay model to prototype to preproduction and finally finished model is retraced in insightful detail during the process many fascinating experimental cars such as the mustang i two seater mustang ii prototype mustang allegro and shorty were built but eventually the mustang based on the existing ford falcon received the nod for final production in a gala event it was unveiled at the 1964 world's fair in new york the mustang received public accolades and critical acclaim and soon it became a runaway hit after the initial success ford designers and gale halderman designed and developed the first fastback mustangs to compliment the coupes the classic mustang muscle cars to follow including the gt mach 1 and others are profiled as well the mustang changed automotive history and ushered in the pony car era as a nimble powerful and elegantly styled sports coupe but it could so easily have stumbled and wound up on the scrap pile of failed new projects this is the remarkable and dramatic story of how the mustang came to life the demanding design and development process and ultimately the triumph of the iconic american car

ford s 351 cleveland was designed to be a mid sized v 8 engine and was developed for higher performance use upon its launch in late 1969 for the 1970 models this unique design proved itself under the hood of ford s mustang among other high performance cars the cleveland engine addressed the major shortcoming of the windsor engines that preceded it namely cylinder head air flow the windsor engines just couldn t be built at the time to compete effectively with the strongest gm and mopar small blocks offerings and the cleveland engine was the answer to that problem unfortunately the cleveland engine was introduced at the end of detroit s muscle car era and the engine in pure cleveland form was very short lived it did continue on as a low compression passenger car and truck engine in the form of the 351m and 400m which in their day offered little in the way of excitement renewed enthusiasm in this engine has spawned an influx of top quality new components that make building or modifying these engines affordable this new book reviews the history and variations of the 351 cleveland and ford s related engines the 351m and 400m basic dimensions and specifications of each engine along with tips for identifying both design differences and casting number s are shown in addition to this each engine s strong points and areas of concern are described in detail written with high performance in mind both traditional power tricks and methods to increase efficiency of these specific engines are shared with the influx of aftermarket parts especially excellent cylinder heads the 351 cleveland as well as the 351m and 400m cousins are now seen as great engines to build this book will walk you through everything you need to know to build a great street or competition engine based in the 351 cleveland platform

preface the author of this very practical treatise on scotch loch fishing desires clearly that it may be of use to all who had it he does not pretend to have written anything new but to have attempted to put what he has to say in as readable a form as possible everything in the way of the history and habits of fish has been studiously avoided and technicalities have been used as sparingly as possible the writing of this book has afforded him pleasure in his leisure moments and that pleasure would be much increased if he knew that the perusal of it would create any bond of sympathy between himself and the angling community in general this section is interleaved with blank sheets for the readers notes the author need hardly say that any suggestions addressed to the case of the publishers will meet with consideration in a future edition we do not pretend to write or enlarge upon a new subject much has been said and written and well said and written too on the art of fishing but loch fishing has been rather looked upon as a second rate performance and to dispel this idea is one of the objects for which this present treatise has been written far be it from us to say anything against fishing lawfully practised in any form but many pent up in our large towns will bear us out when we say that on the whole a days loch fishing is the most convenient one great matter is that the loch fisher is depend ent on nothing but enough wind to curl the water and on a large loch it is very seldom that a dead calm prevails all day and can make his arrangements for a day weeks beforehand whereas the stream fisher is dependent for a good take on the state of the water and however pleasant and easy it may be for one living near the banks of a good trout stream or river it is quite another matter to arrange for a days river fishing if one is looking forward to a holiday at a date some weeks ahead providence may favour the expectant angler with a good day and the water in order but experience has taught most of us that the good days are in the minority and that as is the case with our rapid running streams such as many of our northern streams are the water is either too large or too small unless as previously remarked you live near at hand and can catch it at its best a common belief in regard to loch fishing is that the tyro and the experienced angler have nearly the same chance in fishing the one from the stern and the other from the bow of the same boat of all the absurd beliefs as to loch fishing this is one of the most absurd try it give the tyro either end of the boat he likes give him a cast of ally flies he may fancy or even a cast similar to those which a crack may be using and if he catches one for every three the other has he may consider himself very lucky of course there are lochs where the fish are not abundant and a beginner may come across as many as an older fisher but we speak of lochs where there are fish to be caught and where each has a fair chance again it is said that the boatman has as much to do with catching trout in a loch as the angler well we dont deny that in an untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream fishing
