## **Integrated Mathematics 1981**

mathematics in schools offering the integrated programme is usually taught as an integrated subject so that students will be able to better relate learnt knowledge to new knowledge and transfer conceptual understanding to application as many mathematical concepts are interconnected one driving force to write the series is to provide a guidebook especially for students in the integrated programme the other is to share teaching ideas with other mathematics teachers who love the subject as much as i do features each topic begins with a recap of key mathematical concepts to help students consolidate learning worked examples are included to enhance understanding and application of key concepts with side notes explaining some of the working practice questions are tiered into three levels of difficulty level 1 aims to provide students with the necessary practice level 2 to further build the confidence and test students understanding level 3 to challenge students with higher order thinking questions math wonderland is one highlight of the book activities include extension of the topic suggested alternative assessment and questions to stretch mathematical thinking the primary purpose of the wonderland is to allow students to think deeply about what they have learnt and to appreciate the learning of mathematics beyond classroom step by step solutions to all questions are provided as an additional resource to students problem solving process i hope this book will benefit students studying integrated mathematics as well as those with aptitude for the subject who are preparing for the gce o level mathematics and additional mathematics examinations

## **Integrated Mathematics 1999**

the study reports how 44 secondary school teachers implemented the first two courses of an integrated mathematics textbook series core plus textbook implementation was examined in relation to three components a regular use of textbook b use of a significant portion of the textbook and c consistency with pedagogical orientation chval et al 2009 although the majority of teachers used their textbooks frequently on average they taught less than two thirds of the textbook content during a school year when teaching textbook content teachers used supplemental or alternative materials in nearly 40 of lessons results indicate that teachers placed varying emphases on the four content strands in year 1 the composition of the enacted and written curricula were similar however teachers in year 2 placed more emphasis on algebra and functions at the expense of statistics and probability and discrete mathematics multiple data sources revealed that teachers were generally more faithful to the content contained within the textbook than with presentation of material few teachers spent the recommended number of instructional days on a given lesson and most omitted key instructional components and particular types of homework assignments prescribed by core plus authors additional interview data were collected with regard to teaching assignments analyses revealed that the primary criterion for the assignment of teachers to integrated courses was ultimately an expression of their desire to do so implications for research and practice are discussed and recommendations for future research are offered
