the second edition of avian immunology provides an up to date overview of the current knowledge of avian immunology from the ontogeny of the avian immune system to practical application in vaccinology the book encompasses all aspects of innate and adaptive immunity in chickens in addition chapters are devoted to the immunology of other commercially important species such as turkeys and ducks and to ecoimmunology summarizing the knowledge of immune responses in free living birds often in relation to reproductive success the book contains a detailed description of the avian innate immune system encompassing the mucosal enteric respiratory and reproductive systems the diseases and disorders it covers include immunodepressive diseases and immune evasion autoimmune diseases and tumors of the immune system practical aspects of vaccination are examined as well extensive appendices summarize resources for scientists including cell lines inbred chicken lines cytokines chemokines and monoclonal antibodies the world wide importance of poultry protein for the human diet as well as the threat of avian influenza pandemics like h5n1 and heavy reliance on vaccination to protect

commercial flocks makes this book a vital resource this book provides crucial information not only for poultry health professionals and avian biologists but also for comparative and veterinary immunologists graduate students and veterinary students with an interest in avian immunology with contributions from 33 of the foremost international experts in the field this book provides the most up to date review of avian immunology so far contains a detailed description of the avian innate immune system reviewing constitutive barriers chemical and cellular responses it includes a comprehensive review of avian toll like receptors contains a wide ranging review of the ecoimmunology of free living avian species as applied to studies of population dynamics and reviews methods and resources available for carrying out such research

immunity is as old as illness itself yet historians have only just begun to take up the challenge of reconstructing the modern transformation of attempts to protect against disease crafting immunity assembles in one volume the most recent efforts of an international group of scholars to place the diverse practices of immunity in their historical contexts it is this diversity that provides the book with its greatest source of strength collectively the papers in this volume suggest that it was the craft like small scale and local conditions of clinical medicine that turned the immunity of individuals and populations into biomedical objects that is to say the modern conception of immunity was at least as much the product of the work of healing as it was the systematic result of discoveries about the immune system working outside the narrow confines of laboratory histories crafting immunity is the first attempt to set the problems of immunity into a variety of social technological institutional and intellectual contexts it will appeal not only to historians and sociologists of health but also to social and cultural historians interested in the biomedical creation of modern health regimens
