in a news release dated april 9 2012 polk stated that only 35 of hybrid owners bought a hybrid again when they returned to market in 2011 these findings were based on an internal study conducted by polk the study also indicated that if repurchase behavior among the high volume audience of toyota prius owners wasn t factored in hybrid loyalty would drop to under 25 this news release has generated a lot of interest and concern by the automobile industry as well as consumers since it was published and caused many to think about the idea of hybrid loyalty as well as factors that influence consumers most reactions to the 35 hybrid loyalty dealt with concerns of the viability of hybrid technology as part of the solution to address transportation energy challenges this paper attempts to shed more light on polk s hybrid loyalty study as well as explore several information sources concerning hybrid loyalty status specifically major factors that might impact the selection and acquisition of hybrid vehicles are addressed this includes investigating the associations between hybrid market shares and influencing factors like fuel price and hybrid incentives as well as the availability of hybrid models and other highly fuel efficient vehicle options this effort is not in depth study but rather a short study to see if polk s claim could be validated this study reveals that polk s claim was rather misleading because its definition of loyalty was very narrow this paper also suggests that polk s analysis failed to account for some very important factors raising the question of whether it is fair to compare a vehicle drive train option which hybrids are with a vehicle brand in terms of loyalty and also raises the question of whether hybrid loyalty is even a valid point to consider this report maintains that polk s study does not prove that hybrid owners were dissatisfied with their vehicles which was a common theme among reporting news agencies when polk initially released their findings in this brief review the team has looked at factors that might contribute to a consumer choosing to not purchase a hybrid including the increase in manufacture s overall vehicle mpg and the percentage of the vehicle market owned by hybrids

this book examines the history politics and economics of alternative energy since the energy crisis of the 1970s governments around the world have subsidized and otherwise incentivized alternative forms of energy to reduce dependence on fossil fuels this search has taken on added urgency in the twenty first century as the specter of climate change has engendered ambitious state level renewable portfolio standards enhanced federal incentives and inspired 100 renewable electrical generation targets in such states as vermont and hawaii to save the planet from destruction wind solar and other renewable energy alternatives must replace fossil fuels but how did we get here and what is the cost after an in depth study of the carter administration s synthetic fuels program the focus shifts to the two most prominent perhaps most promising and certainly most promoted and government subsidized green and renewable energies today wind and solar because wind has made the most headway and drawn the most controversy it receives the most attention although the primary focus is on the american experience with renewable energy the policies and politics of renewables in scotland wales denmark spain and other european nations are also discussed issues considered in the book include the nature and efficacy of renewable subsidies the employment of federal and state tax codes to encourage renewables the lobbies and interest groups that campaign for government support of renewables and the fierce battles over the siting of renewable facilities unlike other works on this subject the book probes in depth the nature of the opposition to wind and solar both in the matter of siting and in their worthiness as recipients of substantial government assistance
