the creator of the hit podcast series tides of history and fall of rome explores the four explosive decades between 1490 and 1530 bringing to life the dramatic and deeply human story of how the west was reborn in the bestselling tradition of the swerve and a distant mirror the verge tells the story of a period that marked a decisive turning point for both european and world history here author patrick wyman examines two complementary and contradictory sides of the same historical coin the world altering implications of the developments of printed mass media extreme taxation exploitative globalization humanistic learning gunpowder warfare and mass religious conflict in the long term and their intensely disruptive consequences in the short term as told through the lives of ten real people from famous figures like christopher columbus and wealthy banker jakob fugger to a ruthless small time merchant and a one armed mercenary captain the verge illustrates how their lives and the times in which they lived set the stage for an unprecedented globalized future over an intense forty year period the seeds for the so called great divergence between western europe and the rest of the globe would be planted from columbus s voyage across the atlantic to martin luther s sparking the protestant reformation the foundations of our own recognizably modern world came into being for the past 500 years historians economists and the policy oriented have argued which of these individual developments best explains the west s rise from backwater periphery to global dominance as the verge presents it however the answer is far more nuanced

the color photographs and illustrations appearing in select monographs over the past decade represent a significant advance in surgical communication previously black and white renderings were standard because color printing had not been perfected and its cost was prohibitive we believe the gradual change from black and white etchings and reproductions to detailed color illustrations represents a tremendous twentieth century achievement in our own urologic practices it became evident that the use of black and white sketches for teaching operative urology while helpful left too much to the surgeon's imagination even the dimension of depth produced by varying the intensity of shading often was inadequate in demonstrating subtle surgical details in a fossa or bed since color photography recently has been used to demonstrate operative techniques we climbed on the bandwagon and photographed in color many of the major operative procedures however the reflection of light caused by normal tissue fluid significantly reduces the clarity of photographs not infrequently the crucial operative step is obscured by light reflected on a trickle of blood even when meticulous care is taken to irrigate and clean the surgical field the tissue sheen obscures portions of the field color paintings by a gifted artist are not only unique but can be extraordinary the vividness with which subtleties can thus be portrayed cannot be matched by photography black and white or color
