Flight Surgeon's Manual 1954 includes entries for maps and atlases

Air Force Manual 1956 the purpose of the study is to describe the classification and assignment process applied to men entering military service and to similarly describe the process followed for their separation from the service special attention is given to how previously acquired skills are identified and acted upon and how the recruit's occupational preferences and interests are related to his classification and assignment the nature of the counselling training and placement activities is the focal point of the description of the separation process information was obtained from a review of official policies procedures and manuals interviews with staff members and observation of the classification assignment and separation processes a comparative analysis was made of the procedures of the air force army marine corps and navy author

AF Manual 1961 special edition of the federal register containing a codification of documents of general applicability and future effect with ancillaries

Airman 1956 aircraft communications addressing and reporting system acars is a digital datalink system for transmission of short and relatively simple messages between aircraft and ground stations using the airband vhf radio link the message protocol was designed by aeronautical radio incorporated arinc to replace their vhf voice service and deployed in 1978 using telex type format sita a multinational information technology company later augmented their worldwide data network by adding ground radio stations to provide acars service

National Guard Bureau Bulletin 1966 the code of federal regulations is the codification of the general and permanent rules published in the federal register by the executive departments and agencies of the federal government

Guide for Planning and Conducting On-the-job Training 1974 february issue includes appendix entitled directory of united states government periodicals and subscription publications september issue includes list of depository libraries june and december issues include semiannual index

Federal Data Banks and Constitutional Rights 1986 the faa integrated noise model inm provides a conceptually simple method for characterizing aircraft noise near airports it includes a determination of the total time that the sound level exceeds six different thresholds and also the equivalent a weighted sound level $L_{sub eq}$ and the day night average sound level $L_{sub dn}$ at a number of points surrounding a particular airport evening and nighttime exposures are broken out separately thus several methodologies are integrated into a single model which provides a very complete picture of the noise environment the computer program inmprog is available to calculate all of the above information and to present it in tabular form plotter output is also generated for contours of equal exposures to levels above 85 dba equal $L_{sub dn}$ contours may be produced instead at the user's option this manual is intended to guide the user of the model through the preparation of data required by this program a description of the airport and its operations must be assembled onto data forms a separate chapter specifies the punched card formats so that the punching of cards is distinct from the collection of data technical appendices provide the information required for a computer center to bring up and run the program author
